How Can ChartSpan Help You?

ASSIST

We offer patients a nurse on call 24 hours a day, 7 days a week, 365 days a year. You can call us with any questions, big or small, and speak to one of our nurses regarding any issues.

MANAGE

It can be difficult to keep up with multiple medical conditions, medications and appointments. We help set appointments and manage your prescriptions.

CHECK-IN

You will receive a phone call every month to assist with things like medication refills, setting up appointments and keeping your doctor informed of any needs you may have.

COORDINATE

We assist our patients with things like securing transportation to and from appointments, getting medical equipment, coordinating at-home help and more.

PLAN

Your care team will work with you each month to build a comprehensive care plan for you. Together you set goals based on your specific conditions and needs. Your doctor will have access to this plan so that he/she can have a full view of your care.

ACCESS

You will have access to all of your health records (from any provider or specialist that you see), your care plan, test results, x-rays and all other health documents from a phone, tablet or computer.

WHAT IS CARE MANAGEMENT?

The Care Management Program is a way for patients to receive additional, out-of-office support to ensure better, more comprehensive care. You will receive a care plan that is tailored to your conditions and health history, which will be updated every month by your care team.

What does this cost?

Normal deductibles and copays do apply. In general, if you have a copay when you see your doctor in the office, that copay would apply once a month while enrolled in the Care Management program. To get your specific costs, please check with your insurance company.
